DETAILS OF WORK PROPOSED

Convert well to a Muddy "J" Sand water injection well. TD 6771, PBD 6738. Completed in "J" Sand (perfs 6694-6710) in Jan. 1959, for an I.P. of 319 BOPD. Well watered out August, 1962.

When we were considering the Barrett Unit for use in a Maraflood Project we ran a pressure transient test in the "J" Sand reservoir in this field with Well No. 12 as a water injection well. (Jan. 1969) The test ran for only one month. After the pressure transient test Well No. 12 took water at such a low pressure we were able to pump water into it without the use of the regular triplex pump (which is expensive to operate). Therefore, we have continued to inject water into it, but we overlooked submitting a sundry notice until this date. Total injection into this well up to Jan. 31, 1970 are 183,031 BW. Only produced water is being reinjected into the "J" Sand at this well.

I/We hereby swear (or affirm) that the statements herein made are complete and correct.
